<b>[9]</b>	Un-numbered Plate block, without flaw	\$ 120	

The presence of a minor flaw (two marks on the fraction bar) on one of the un-numbered plates is the accepted way of differentiating between these two plates. As it occurs on R8/3 a block of nine stamps with bottom and side selvedge is necessary to ensure that its positional place on the plate is unmistakable. This R8/3 flaw must not be confused with the much more noticeable flaw on R8/3 of plate No. 1A small letters. The fact that "R8/3" is a "flawed" stamp on two different plates is purely coincidental.

The ½ d was withdrawn on 28 February, 1938.
